HALO EXTERRA | Exterior Insulating Sheathing

EXTERIOR BREATHABLE & MOLD-RESISTANT ADVANCED INSULATING SHEATHING.

Specifically designed for exterior above-grade walls.

- A high performance Neopor core laminated on the exterior with a clear perforated polypropylene laminate
- Independent testing has shown that, with 1/2" o/c perforations, Exterra (in thicknesses up to 1 5/8") has a permeance greater than 60 ng/Pa-s-m2
- Thus per building code, Exterra is "permeable" and allows moisture to leave the wall cavity.
- When the joints are taped, Exterra can also act as the exterior air and weather barriers.

Continuous Neopor EPS insulation creates thermal break

Perforated laminate allows vapor to escape wall assembly

Water & air kept to the exterior
